NEC Training

Build expertise in NEC4 contracts and project delivery, wherever you're working

Discover more at **neccontract.com**

Why Choose NEC Training

NEC Training is the official training and accreditation provider for NEC Contracts, part of Thomas Telford Ltd, the commercial arm of the Institution of Civil Engineers (ICE). Every accreditation is awarded by the ICE and every course is built and delivered by NEC specialists, the people who write and interpret the contracts. Whichever stage you're at, from a first introduction to full accreditation in a project leadership role, we have a course for it.

Why training matters now

Training is the single biggest barrier standing between the industry and wider use of collaborative contracts, according to NEC's own research.

40%
cite the need for training as the single biggest barrier to wider use of collaborative contracts

68%
have never heard of, or only partly understand, sustainability clauses such as Option X29.

57%
expect a shift in the industry's culture to have a major impact on collaborative contracting within five years.

Source: NEC Contracts, Transforming Construction: Smarter, greener, together (more than 250 UK built environment professionals).

The report points squarely at training as part of the fix. It names NEC Training as offering courses that cover both the technical detail of clauses like Option X29 and the wider principles of building sustainability into contract management.

The same pattern shows up globally. NEC's 2026 Trust, Contracts and Outcomes study, based on responses from more than 1,000 professionals across five markets, found that when people don't fully understand the contract they're working under, the behaviours that make NEC collaborative - like early warnings and compensation events - simply don't happen. Closing that gap is one of the most direct ways to improve how a project runs.

Your training pathway

New to NEC? Start with an introductory course on how the contracts work and how the suite fits together, such as Introduction to the NEC4 Engineering and Construction Contract (ECC) or Introduction to the NEC4 Facilities Management Contract (FMC).

Ready to go deeper? Our Getting it Right courses cover best practice preparation and management of a specific contract, such as Getting it Right: Preparing the NEC4 ECC and Getting it Right: Managing the NEC4 ECC.

Ready to lead? Our accreditation programmes lead to an internationally recognised, ICE-awarded qualification and a place on the NEC Accreditation Register.

Every course is available as classroom, virtual or blended formats and open to delegates internationally.

NEC Accreditation Suite

Built for professionals who already have hands-on NEC experience and are moving into, or already working in, a project leadership role. Pass and you'll join the NEC Accreditation Register with the post-nominal to show for it, for as long as your accreditation stays valid.

New post-nominals

From June 2026, we replaced the single NECReg designation with three role-specific post-nominals: NEC AccPM, NEC AccS and NEC AccSM. Each one now reflects the exact NEC expertise you hold, not just that you're accredited. Use them on bids, on LinkedIn, in front of clients, wherever it counts, alongside more than 19,000 other professionals on the NEC Accreditation Register.

Accreditation is valid for five years. Renew it to keep the post-nominal current.

Accreditation	NEC4 duration	Post-nominal
NEC4 ECC Project Manager Accreditation	Classroom or virtual: four days. Blended: online modules over approximately two months plus a one-day consolidation session.	NEC AccPM
NEC4 ECC Supervisor Accreditation	Two days classroom or virtual, plus online pre-course modules.	NEC AccS
NEC4 TSC Service Manager Accreditation	Four days, plus online pre-course modules.	NEC AccSM
NEC4 FMC Service Manager Accreditation	Four days, plus online pre-course modules.	NEC AccSM
NEC4 DBOC Service Manager Accreditation	Extension only, one day. Open to holders of the ECC Project Manager or TSC Service Manager accreditation.	NEC AccSM

The same post-nominal structure applies to the equivalent NEC3 accreditations: ECC Project Manager, ECC Supervisor and TSC Service Manager

International training pathways

NEC Training extends far beyond the UK. Here's what's on offer and what has changed recently across our international markets.

Hong Kong

Classroom accreditation runs regularly in Hong Kong, delivered in partnership with the Construction Industry Council, alongside the UK. Already accredited as a TSC Service Manager and want to add Project Manager? The NEC4 TSC Service Manager to ECC Project Manager Accreditation Extension Course gets you there without starting again.

Singapore

NEC has partnered with BCA Academy to deliver training in Singapore, following our official launch in the market in August 2025. The first course, the Certification Course on Collaborative Contracting (Construction), ran as a four-day programme, one day online plus three days in the classroom, at BCA's Braddell campus in October and November 2025, covering NEC4 ECC preparation and management alongside the Public Sector Standard Conditions of Contract (PSSCOC). Himashi Soriano joined as Country Manager, Singapore in February 2026, with a clear brief: build structured learning pathways and formal accreditation, not just awareness.

Peru

Spanish-speaking learners in Peru have their own dedicated route, following the same three-level structure as the English-language pathway: Fundamentos del Contrato de Ingenieria y Construccion (ECC) del NEC4 to start, then Nivel 2 (Preparacion and Gestion of an ECC), then Nivel 3: Acreditacion de Gerente del Proyecto del ECC. Level 3 calls for three years' professional experience administering NEC3 or NEC4 contracts, and leads to the full NEC4 ECC Project Manager Accreditation, NEC AccPM included.
Julio Cabrera joined as Country Manager, Peru in April 2026, with extensive experience from both the private sector and the delivery of major public infrastructure projects under NEC3 and NEC4 contracts.

Australia

The NEC4 Foundation Certificate Programme (Australia) is a two-day course built specifically for Australian users, covering the full bundle of ECC options and finishing with a multiple-choice assessment. It's a strong entry point rather than a shortcut: it leads to a separate NEC4 Foundation Certificate rather than full Accreditation Suite membership, so it doesn't carry a post-nominal.

Ireland

Ireland trains on the core international programme, with virtual and blended delivery available.

Getting started

Book a public course or contact our team to discuss in-house and corporate training packages tailored to your organisation.
